

TEST REPORT

Test Report DIN EN 10204 – 2.1

NORRES has tested spiral hoses of different types for an assessment of their electrostatic properties regarding their use in hazardous areas.

Taking into account the revised version of TRGS 727 (formerly TRBS 2153), hose types were tested using samples in order to assess 34 different series of hoses.

The results concerning the use of the different series in hazardous areas are shown in the following table. Generally, it can be stated that according to the revised version of TRGS 727 only such hoses are permitted for pneumatic transport that have diameters between 50 and 160 mm. In addition to that, regarding the scope of Directive 2014/34/EU (ATEX Directive), the following statement can be issued for the spiral hoses: The spiral hoses are not 'equipment' or 'components' as defined by 2014/34/EU. However, it can be stated that, based on national and international regulations, the individual types of spiral hoses when earthed meet the electrostatic requirements for the intended use given in the table. This quality can be considered when issuing a hazard assessment for equipment that is subject to Directive 2014/34/EU (ATEX Directive) and in which the spiral hoses are supposed to be used.

Hose type	Article number	Intended use					
		Pneumatic transport of flammable dust (Zones 20, 21, 22 inside)	Aspiration (no Zone or Zone 22 inside)	Transport of flammable liquids (Zone 0, 1 & 2 inside)	Transport of non flammable liquids	Use in Zones 1 and 2	Use in Zone 0

¹ **Note:** If those material properties are ensured for each product supplied and if simultaneously, this property is also permanently ensured by the operational use, then there are no objections against the use of the hoses in the hazardous areas mentioned above as far as their electrostatic properties are concerned. This statement only applies on the condition that the products manufactured comply with the test specimen. Whether the compliance of the products manufactured with the test specimen is observed by NORRES could be shown on demand by an additional production batch specific test report.
